# Omega Bariagaber

## Technical Implementation Leader | Applied AI & Data Integration

San Jose, CA | (616) 308-0301 | omegabariagaber@gmail.com | LinkedIn Profile | Ask My AI About Me

## CAREER HIGHLIGHTS

- Delivered **25+ implementation** projects across **Fortune 100 accounts** at Medallia, from discovery and data integration through launch, consistently **on time or ahead of schedule**
- **Rescued two at risk enterprise accounts**, lifting **client NPS by 25+ points** through reliable delivery and proactive communication, helping secure **$5M+ in renewals**
- Built **end to end CX data pipelines** that **turned 10M+ raw customer records** into real time dashboards, closed loop alerts, and CRM integrations
- Led **predictive maintenance** at Marathon Petroleum using OSI PI sensor data, **improving safety** and **generating multimillion dollar savings** in reduced downtime, featured in the company wide quarterly roundtable
- Built a **workforce compliance application** used by up to 750 union craft workers and contractors, checking skill levels and hours before job sign up to prevent overtime violations and save **$500K+** in penalties over two years

## PROFESSIONAL EXPERIENCE

***Senior Technical Consultant, Professional Services*** July 2021 – October 2025
**Medallia** Remote - CA

Led enterprise CX platform implementations for Fortune 100 clients, working directly with stakeholders to understand what they needed and building the platform around it

- Ran discovery and requirements sessions with enterprise stakeholders and built the Medallia solution from what came out of them
- Owned full lifecycle implementations, including solution design, platform configuration, data integration, custom workflows, UAT, and launch
- Customized the platform to fit each customer's operating model and worked with Product and Engineering to close technical gaps
- Built and maintained 60+ Power BI dashboards with automated daily reporting, supporting 2,000+ users per account across global organizations with real-time visibility into CX performance
- Trained customers on new platform features and kept supporting them afterward, so they got value sooner
- Developed an AI-assisted sentiment classification model (84% accuracy) that reduced manual feedback review by 40% and helped Customer Success identify at-risk accounts earlier
- Managed two offshore teams (6+ analysts and engineers) across concurrent client engagements while maintaining 97% SLA compliance

***Senior Business Analyst*** September 2017 – December 2020
**Marathon Petroleum** Remote/Oakland - CA

Worked on site at a California refinery, partnering with engineering, compliance, and operations to keep technical solutions and reporting aligned with regulatory priorities

- Designed and deployed Power BI dashboards tracking environmental and operational KPIs across California facilities, improving visibility and streamlining compliance reporting
- Defined and validated environmental and operational metrics with engineering and operations teams, ensuring reporting accuracy and audit readiness
- Delivered web-based operational tools that reduced compliance penalties by $250K annually
- Led migrations off legacy systems, which made reporting more reliable and got more site teams using it

## SUMMARY

Technical implementation leader with 10+ years across enterprise software delivery, business analysis, and QA. I've led SaaS implementations for Fortune 100 clients from discovery through launch, working directly with customers to turn business needs into data integrations and platform configurations, and partnering with Product and Engineering to resolve technical gaps along the way. Recently I've been deepening my Python and software development skills through hands on projects, using AI to speed up planning, development, and testing while reviewing and validating everything it produces. I'm looking for a technical role where I can stay hands on with data, integrations, and automation.

## TECHNICAL SKILLS

**Programming & Development:** Python, SQL, JavaScript, TypeScript, Node.js, HTML/CSS
**Data Engineering & Integration:** REST APIs, JSON, Data Mapping & Transformation, ETL, Data Validation, Postman, Informatica
**Analytics & Business Intelligence:** Tableau, Power BI, Google Analytics, SAP BusinessObjects
**AI & Automation:** n8n workflows, LLM API integration, agent context design, output validation, human approval gates
**AI-Assisted Development:** Claude, Cursor, Codex CLI, GitHub Copilot, ChatGPT
**Enterprise Platforms:** Salesforce, Medallia, Calypso
**Testing & Delivery:** API Testing, Behavior-Driven Development (BDD), UAT, Jira, Confluence

## CERTIFICATIONS

Medallia Product Certification · Google Project Management Certificate · Agile Project Management Certification · Lean Six Sigma Yellow Belt

***Infrastructure Quality Engineer*** February 2015 – August 2017
**Nasdaq/Calypso** San Francisco - CA

Validated and maintained enterprise trading platforms, integrating third-party financial systems while ensuring accurate real-time market data flows

- Promoted within six months to Infrastructure team responsible for stable integration of external market data into trading platforms
- Led validation and integration of interfaces with Bloomberg and Reuters, ensuring accurate data flow and consistent platform performance
- Increased automation coverage using behavior-driven testing (BDD), reducing regression defects by ~30% and improving release quality
- Developed automated test strategies and scripts in partnership with Product and Engineering to support reliable releases

***Front Office QA*** July 2014 – January 2015

- Validated front office trading workflows across order management, pricing, and risk modules, from trade capture through P&L calculations
- Partnered with traders, product managers, and developers to turn requirements into test scenarios for complex financial instruments, and used SQL to reconcile trade data and validate pricing logic
- Ran regression, functional, and UAT testing on new releases and caught high-impact defects before they reached production

***Associate Consultant/Data Analyst*** *(Intern)* January 2014 – June 2014
**Saama** San Jose - CA

Selected for an international Business Intelligence program in India, where I trained on data architecture, ETL, and visualization tools while building end-to-end reporting solutions

- Designed relational data models and ETL pipelines using Informatica to consolidate structured data sources
- Built interactive Tableau dashboards and semantic reporting layers in SAP BusinessObjects for self-service reporting

## INDEPENDENT PROJECTS (AI & APPLIED DEVELOPMENT) October 2025 – Present

**Can I Park Here?** | Mobile OCR & Parking Rule Engine (React Native, Expo, TypeScript, OCR API)

- Built a cross platform app, tested on device, that reads parking signs with cloud OCR and shows whether parking is allowed, restricted, or uncertain right now
- Paired cloud OCR extraction with a deterministic TypeScript rule engine for 10+ sign types, including permit exceptions and wraparound day ranges, returning “uncertain” instead of guessing when a sign can’t be read reliably

**CareerOS** | AI-Powered Job Search Tool (Next.js, TypeScript, OpenAI API, SQLite)

- Built a full stack tool that pulls and normalizes listings from three job APIs, with multiple resume profiles that surface the best matches for each
- Designed hybrid fit scoring: weighted rules for deterministic criteria, with GPT-4o-mini evaluating only the fuzzier judgment of how well a role matches

**Storefront Studio** | Client Intake Tool (Next.js, TypeScript, n8n, Docker, GitHub API, Resend)

- Built an intake flow that validates small business inquiries and commits them as structured markdown context for downstream AI agent workflows
- Connected the intake flow to an n8n workflow through a webhook, where an AI agent reviews the client context and proposes an approach for the user to approve before anything moves forward

## CORE COMPETENCIES

Client-Facing Consulting · Requirements Gathering & Analysis · Enterprise SaaS Implementations · Stakeholder Management · Cross-Functional Collaboration · Analytics Strategy & Insights · Offshore Team Leadership

## EDUCATION

Michigan State University

Bachelor of Science, Media & Communication Technology, with Cognate in Business

## LANGUAGES

- English (Native)
- Tigrinya (Fluent)
- Amharic (Fluent)
